

(1) In retrospect, what could you have done better to reduce the time you spent solving this assignment?

(2) What could the Principles of Software staff have done better to improve your learning experience in this assignment?

(3) What do you know now that you wish you had known before beginning the assignment?

- To reduce the time I spent on this assignment I would probably look more into the formatting of the test cases as I had to go back and change the way my controller was printing information. I think the PSOFT staff did a perfect job with this homework as I feel a lot more comfortable now with object oriented programming. Especially after creating like 3 new custom classes myself to make my program run more efficiently. I do wish that there was more about the test case formatting on the PDF as I did not know that the formatting for the test cases were that different from what we were from the expected outputs for hw7.
